SUMMARY

SDET with 3+ years of experience, including 2 years as founding QA lead at FlintLab, a real-device testing platform. Built the Appium framework and nightly regression behind **612+ automated tests** on **50+ real iOS and Android devices**, led a team of 5 QA engineers through release sign-off, and shipped the backend services under test in Python and FastAPI.

EXPERIENCE

FlintLab India Pvt Ltd · Founding Engineer, QA Lead

Jun 2024 to Present

- Led quality engineering for a device automation platform spanning Web, REST API and iOS/Android apps; managed **5 QA engineers** and owned test strategy, planning, execution and release sign-off.
- Built a modular **Appium** framework in Python and Pytest that moved driver setup, capabilities and teardown into config-driven components, so new tests need only test logic; cut authoring time for the whole team.
- Automated end-to-end regression on **50+ real devices** with XCUITest, WebDriverAgent and UiAutomator2, and owned the iOS provisioning and WebDriverAgent activation every iOS run depends on.
- Merged suites from several engineers into one nightly run of **612+ tests** across Android, iOS and web (Playwright), with a platform-health dashboard and automated morning reports to engineering and product.
- Built a unified test automation and CI/CD pipeline for an Odoo-based asset tracking client (Bighorn Cylinder Track), cutting the release cycle from **1 week to 2 days**; owned iOS and API testing (Postman) and surfaced **30 defects in week one** from a traceable TestLink execution matrix.
- Mariposa Care (healthcare, iOS/Android/Web): filed, reproduced and triaged **125 defects** in JIRA, led root-cause analysis with developers, and delivered defect dashboards and executive reports.
- Designed and built Nexus Device Enrollment, a blueprint-driven layer that brings Android and iOS devices to a session-ready state on connection, removing manual setup before every test run.
- Shipped backend services under test (FastAPI, Redis, PostgreSQL, Docker/Podman), including containers that spin up Appium-ready environments on real devices in **8 seconds** and a **94% API latency cut** (300 ms to 18 ms).
- Used Claude Code and Cursor to generate and refactor Appium tests from requirements and speed up failure analysis.

Cognizant Technology Solutions · Process Executive

Aug 2021 to Oct 2022

- Validated production data against defined quality criteria and escalated mismatches with documented analysis; Employee of the Month 3 times for accuracy.

EDUCATION

MCA · Gayatri Vidya Parishad, Visakhapatnam

2022 to 2024

Bachelor of Science · Prism Degree and P.G. College, Visakhapatnam

ACHIEVEMENTS

- Employee of the Month, Flint Excellence Citation, awarded by FlintLab's CEO (Jul 2026)
- Featured in The Hindu at the A.P. Digital Technology Summit (Jan 2025) · 5th place, Yi Enterprising Bharat pitch competition
